

```

                                cctp.ini
# -----
# ----- cctp.exe Configuration File -----
# -----
#
# This configuration file contains all the parameters
# that you can set for the program.
#
# In the following there is a list of such parameters
# with the default value specified and the command line
# option to set the parameter from the console prompt.
#
# op_mode           =                               # -sr -send -receive -status
-clear -reset
# module_name       =                               # -m
# user_id           =                               # -u
# process_id        =                               # -p
# UserName          =                               #
# Password          =                               #
# input_file        =                               # -i
# output_file       =                               # -o
# parameters        =                               # -x
# wait_time         = 5                             # -w
#
#
# ----- parameters -----
#
op_mode           = sr
module_name       = mie
user_id           = 00000001
process_id        = 1
Username          = your_username
Password          = your_password
input_file        = input_mie.dat
output_file       = output_mie.dat
parameters        = -i input_mie.dat -o output_mie.dat
wait_time         =

#
# all these (except than Username and Password) can be specified in command
# line in a such way:
#
# cctp.exe -sr -m mie -u 1 -p 1 -i input_mie.dat -o output_mie.dat -x (-i
input_mie.dat -o output_mie.dat)
#
